

# Programming Assignment 1

**Title: To Perform Binary Addition on n-bit numbers**

**Objective:**

To design and study n bit binary Adder

**Pre-requisites:**

- 1.Binary Arithmetic
- 2.Ripple carry Adder Theory

**References:** Computer Architecture and Organization  
-John p. Hayes

**Algorithm:**

- 1.Convert 2 user entered decimal numbers into binary
- 2.Starting from LSB & going up to MSB , add the two bits & set their sum in the proper location of array  
, set the carry and consider it for the next bit pair
- 3.Display the result
- 4.stop

result

**Observations:**

Note the binary numbers to be added and their Sum

**Post Labs Assignments :**

- 1.What is a serial adder?
- 2.Compare Serial Adder, Parallel Adder & Carry Look Ahead Adder

# Programming Assignment-2

**Title: To Perform Binary Sub tractor on n-bit numbers**

**Objective:**

To design and study n bit binary Sub tractor

**Pre-requisites:**

- 1.Binary Arithmetic
- 2.2's complement Method of subtraction

**References:** Computer Architecture and Organization  
-John p. Hayes

**Algorithm:**

- 1.Convert 2 user entered decimal numbers into binary
- 2.Take 2's complement
- 3.Perform binary addition as described previously
- 4.Check for carry left after adding MSB of the number.

- a) If carry =1, drop it and report the answer
  - b) If carry =0, take 2's complement of the result and report answer with a minus sign
- 5.stop

**Observations:**

Note the binary numbers to be subtracted and their Difference

**Post Labs Assignments :**

1. Subtract 10101100 from 001101010 by 2's complement method
2. Subtract 01101101 from 11000101 by 2's complement Method

## Programming Assignment-3

**Title:** To perform multiplication of two unsigned numbers with shift and add algorithm

**Objective:** To design and study n-bit binary multiplier with shift and add algorithm

**Pre-requisites:**

1. Binary arithmetic
2. Shift and add method of multiplication

**references:**

Computer Architecture and Organization  
-John p. Hayes

**Algorithm:**

1. Initialise Q-multiplier, B multiplicand, c-carry  
accumulator=0
2. check for  $Q_0$ 
  - a) accumulator=accumulator+B
  - b) Right shift C,A,Q by 1 bit
3. Repeat step 2 N number of times
4. Result is stored in integers A and Q
5. stop

**Observations:**

Note the binary numbers to be multiplied and their final answer

**Post Labs Assignments :**

1. What is array multiplier?
2. Implement hardware for unsigned Multiplication.

# Programming Assignment-4

**Title:** Write a program to implement Booth's algorithm for multiplication

**Objectives:** Study of Booth's algorithm

**Pre requisites:** Knowledge of booth's algorithm and C programming

**References :** Computer Architecture and Organization

-John p. Hayes

Computer Architecture and Organization

-Stallings

**Algorithm:**

1.Begin

2.Initialize registers for result

3.Bring the multiplicand into register M

4.Bring multiplier into a register Q

5.Least significant bit of Q=Q<sub>0</sub>, Next LSB=Q-1

6.scan the multiplier bits

7.If two bits are same, the all the bits are right shifted by

one bit

8.If two bits are different, then the multiplicand is added or

subtracted

from result

9.This addition and subtraction is followed by right shifted

10.Goto step 8 till count i.e. multiplier =0

11.End

**Post Labs Assignments :**

1.Explain Advantage of Booth's algorithm for Multiplication.

2. Explain Hardware implementation of Booth's Algorithm.

3. Explain Bit pair Recoding of multipliers.

# Programming Assignment-5

**Title:** Write a program to implement Integer Division

**Objectives:** Study of Integer Division

**Pre requisites:** Knowledge of Integer Division algorithm and C programming

**References :** Computer Architecture and Organization

-John p. Hayes

**Algorithm:**

- 1.Shift C, AC, Q left by 1 bit.
- 2.AC  $\leftarrow$  AC-M [subtraction and checking the can be used for comparison]
- 3.If the sign of AC is negative (i. e. C=1), set Q<sub>0</sub> to 0 and add M back to AC ; otherwise, set Q<sub>0</sub> to 1.

**Post Labs Assignments :**

- 1.Perform division of the following positive numbers using restoring Division 1000 / 11 register size , n=4 bits.
2. Explain hardware Implementation of Integer division.
3. write an Algorithm for Non restoring Division Algorithm

## Programming Assignment-6

**Title:**To implement LRU Replacement Algorithm in C Language

**Objective:** LRU Replacement Algorithm

**Pre-Requisites:**Replacement Algorithm and C Language.

**References :** Computer Architecture and Organization

-John p. Hayes

Computer Architecture and Organization

-Stallings

**Algorithm:** 1.Maintain a 2bit counter associated with each block of cache

2.When hit occurs , the counter of the blocks reffered is set to 0, counters with values originally lower than the reference one are incremented by one and all other remain unchanged.

3 a)When miss occurs and set is full , counter associated with set=0 and others incremented by one

b)When miss occurs and set is full, here block with highest count is removed and all others are incremented by one.

4) Continue steps 1-3 to replace or place other blocks.

5) stop

**Post Labs Assignments :**

- 1.Explain concept of virtual memory.
- 2.Explain TLB with its advantages.

## Programming Assignment-7

**Title:**To implement FIFO Replacement Algorithm in C Language

**Objective:** FIFO Replacement Algorithm

**Pre-Requisites:**Replacement Algorithm and C Language.

**References :** Computer Architecture and Organization

-John p. Hayes

Computer Architecture and Organization

-Stallings

**Algorithm:** 1)when a new block occurs, check if the cache blocks empty If any one is empty , map this to the empty block of cache.

2)If a hit occurs, do nothing

3)If a miss occurs, replace the block which came first in cache with the new one.

4)Repeat 1-3 to map all blocks

5)stop

**Post Labs Assignments :**

1.Explain Demanding paging.

2.Explain paged segmentation.

## Programming Assignment-8

**Title:**To study Direct mapping using c.

**Objective:** Direct Mapping technique.

**Pre-Requisites:**Direct mapping and C Language.

**References :** Computer Architecture and Organization  
-John p. Hayes  
Computer Architecture and Organization  
-Stallings

**Algorithm:**

- 1) Enter the size of main Memory,Cache memory size
- 2) Enter size of each Block.
- 3) Number of blocks in main Memory and cache memory are calculated by dividing the size of main memory and cache memory by size of 1 block.
- 4) Enter the block number of main memory which is to be mapped into cache.
- 5) The remainder obtained after dividing the value obtained in step 4 by total number of cache blocks is cache block number.
- 6) The quotient of above division gives the tag bits.
- 7) Display above result
- 8) stop.

**Post Labs Assignments :**

- 1.List out Advantages and disadvantages of Direct mapping.
- 2.What is Hit Ratio?
- 3.Explain Cache Organization.

## Programming Assignment-9

**Title:**To study set associative mapping using c.

**Objective:** Set Associative Mapping technique.

**Pre-Requisites:**Set Associative mapping and C Language.

**References :** Computer Architecture and Organization  
-John p. Hayes  
Computer Architecture and Organization  
-Stallings

**Algorithm:**

- 1) Enter the size of main Memory,Cache memory size
- 2)Enter size of each Block.
- 3)Number of blocks in main Memory and cache memory are calculated by dividing the size of main memory and cache memory by size of 1 block.
- 4)Enter whether it is 2 way associative or 4-way associative mapping
- 5)Calculate the number of sets in the cache memory.
- 6)Enter the block numbers of main memory which is to be mapped in cache memory
- 7) $j=m$
- 8)Calculate the tag bits
- 9)Display the above result

10) stop

**Post Labs Assignments :**

1. Design a 2way set associative memory with following details.

Cache consists of 32 words.

each Block consists of 4 words

size of main memory =256 words

Find number of bits in each of TAG, BLOCK/ SET and WORD.

2. Explain Difference between Associative and Set associative mapping.

## **Programming Assignment-10**

**Title: Case Study on SPARC.**
